

RECYCLING CERTIFICATION INSTITUTE

AUDITED. VALIDATED. CERTIFIED.

The Recycling Certification Institute (RCI) was established to address the growing demand for reliable and transparent reporting on recovery and recycling practices by C&D (Construction and Demolition) recycling facilities. RCI is built around the National Standard CORR Protocol, the only third-party certification protocol for C&D recycling developed to ISO-level standards.

Through the use of independent third-party evaluators, RCI's Certification Process:

- Ensures the accuracy and credibility of the recovery and recycling rates reported by participating facilities.
- Provides a comprehensive set of protocols, guidelines, and tools for professional assessment and certification, the Institute aims to enhance transparency and instill greater confidence in the C&D recycling industry
- Fosters trust among key stakeholders—including project owners, architects, environmental groups, municipalities, and the public—ensuring that reported recycling rates are both reliable and verifiable.
- Gives your facility a marketing edge over non-certified facilities

WHAT ARE YOUR C&D FACILITY'S RECYCLING RATES?

The recycling of C&D waste is rapidly growing, driven by initiatives like the US Green Building Council's LEED program and state and municipal laws aimed at increasing C&D material recovery. LEED provides a framework for green building practices, including mandatory minimum recycling rates for C&D materials. Additionally, many municipal sustainability departments now require that all C&D waste be recycled to meet set standards.

CAN YOU PROVE IT?

CORR is the ONLY program that provides a credible, third-party look at the true recycling rates. It is the only program recognized by USGBC for LEED credit for using a certified recycling facility.
